

## IN THE SPECIFICATION

Please amend the Specification by replacing paragraph [0067] on page 13 with the following text:

-- In a certain position, the magnetic actuator MAC with a load (~~not shown~~) coupled to either the first actuating part MAC1 or the second actuating part MAC2, is in a steady state. In other words, the net force (the difference between the magnetic force of the magnetic actuator MAC and the force exerted by the load) is substantially zero.--
